**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

1. This office action is responsive to application filed on 10/30/2003. Claims 1-34 are pending in this office action.

### *Claim objections*

Claim 1, the term "a signal at the non-controlling input follows a fall of a signal at the controlling input after a fall delay" is unclear to what applicants intend to mean because examiner found that a signal at the non-controlling input cannot follow a fall of a signal at the controlling input after a fall delay . Clarification or correction is required.

### Double Patenting

Claims 1,15,29,33 are rejected on the ground of nonstatutory double patenting over claim1 of U. S. Patent No. 6654940 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

a device coupled between a controlling input of a gate and a non-controlling input of the gate (meet the limitation of "an input node coupled to a controlling input of a gate" in 6654940),

wherein signals at the controlling and non-controlling inputs rise substantially simultaneously on a first edge (meet the limitation of "signals at both the input and output nodes rise and fall substantially simultaneously on a first edge" in 6654940); and

on a remaining edge, a signal at the non-controlling input follows a fall of a signal at the controlling input after a fall delay (meet the limitation of "on a remaining

Art Unit: 2825

edge, a signal at the output node follows one of a rise and a fall of a signal at the input node after an output node delay" in 6654940).

The remaining claims contain features similar to the rejection of claim 1 and rejected in the rationale.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
